

A NEW DIMENSION OF POWER AND QUIETNESS

Miele rangehoods with external fan motors

Miele New Zealand now offers a selection of powerfully effective rangehoods complemented by external fan motors to achieve greatly reduced noise levels during operation.

While this is the first time Miele has introduced this concept to New Zealand, the separation of the motor from the rangehood, with its installation away from the kitchen, is nothing new. External fan motors have most successfully been an integral part of Miele's product range in Europe for a number of years.

In this market, a choice of four either two slimline (DA 3466 EXT and DA 3496 EXT) or built-in (DA 2270 EXT and DA 2690 EXT) Miele rangehoods are available for use with three different styles of external fan motors, resulting in no less than 12 different combination options.

It is simply up to the architect, designer, developer, specifier or end consumer to consider which of these three external fans best meet their requirements -

Miele AWG 102:

Designed for vertical installation on an external wall.

A curved, high quality stainless steel casing directs the extracted air in a downward direction and provides the high performance motor with effective protection from the elements.

Miele DDG 102:

Designed for installation on angled, tiled roofs.

In addition to its decorative high quality stainless steel casing, the DDG 102 is supplied complete with the appropriate roof flashing. This makes it a perfect option for freestanding homes.

Miele ABLG 202:

Designed not to be seen externally

The ABLG is the ideal choice where design criteria or building regulations may require the external fan motor not to be visible from outside the home. This unit can easily be installed in an empty roof space, a butler's pantry, or perhaps even in the garage.

NEW DIMENSION OF POWER AND QUIETNESS continues.....

All three external fan motors offer optimum air throughput performance and are supplied with a 5 m long connection cable. Additional connection cables are available in either five, nine or 12 m length, to accommodate the vast range of different home layouts and designs.

In those situations where sound emissions to the open atmosphere may be of particular concern, Miele offers optional DASD 150 silencers, which can easily be installed in any suitable ducting of 150 mm diameter.

Combination packages of rangehood with the selected external fan motor are available from Miele Chartered Agents and the Auckland Miele Experience Centre, starting from just \$2,498.
